MI.GE-1004.1 De-Aired Apparatus

De-Aired Tank is designed to remove dissolved gasses from ordinary clean water. The apparatus consists of an acrylic closed cylinder having complete tank capacity of 20 Liter, which is connected to vacuum pump provided. On the top one 50 MM diameter vacuum gauge is provided for check the vacuum of the water. The time controlled by PID controller.

Capacity : -20 liter

Quickly and efficiently reduces the dissolved oxygen content in test water.
Provided with vacuum Gauge
Corrosion resistant cylindrical chamber made of Acrylic material.
Vacuum Pump () Having and can create of vacuum
Vacuum Pump Water Vapor Trap.

Technical Specifications:

Tank Capacity	Appx. 20 Litre
Air Discharges capacity	150 Liter/min of air
Capacity of Vacuum	Up to 710 mm (28 in.) of mercury(Hg)
Operating Voltage	120 or 230 VAC 50 /60 Hz
Tank Material	Acrylic
